#### RETAINS PERFORMANCE CHARACTERISTICS LONGER

Tested using Martindale abrasion resistance tests in line with the NFEN ISO 12947-2 standard by the French Fabric and Clothing Institute. No wear and tear after 50 000 cycles! Retains original appearance and stands up to the toughest conditions – certified long lasting quality.

#### HYDROPHOBIC – ULTRA-FAST DRYING

Born of a combination of an ancient technology – weaving – and the latest in state-of-the-art elastic yarns. This unique structure offers an outstanding quality – ultra-fast drying.

#### DYNAMIC, LONGTERM PERFORMANCE

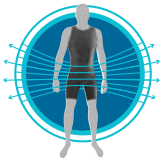

Offers freedom of movement in every direction – no need for extra effort. Extraordinary sense of freedom combined with outstanding muscle support.

#### INCOMPARABLE LIGHTNESS

Fabrics commonly used for sports applications add a superfluous weight of around 200g when dry, compared to 130g for Speedskins for a comparable opacity ie a 54% weight saving. This difference increases even further in conditions in which the fabrics become wet.

#### REVOLUTIONARY ELASTICITY

Over 20% more extension than any comparable mesh even when pulled heavily out of shape. Allows for significant simultaneous extension without transferring traction from one axis to the other.

#### SUPER CHLORINE RESISTANT

Loses only 17% of elasticity after 60 hours of racing, compared to 70% for traditionally knitted structure

#### UPF 50 GUARANTEED

Ultimate sun protection factor – tested to AS/NZS 4399 norm.

#### MULTIDIMENSIONAL ELASTIC MOVEMENT

Fabric extends in all directions to follow muscle and joint movement – gentle retention mechanism creates highly effective second skin effect.
